CBER References: EUA 27034.0

IND Title: Human Coronavirus mRNA Vaccine (SARS-CoV-2 Spike Protein; BNT162b2) in Lipid Nanoparticles (ALC-0315, ALC-0159, DSPC and Cholesterol) (Pfizer-BioNTech COVID-19 Vaccine)

SUBJECT: CBER discussion points regarding datasets

Dear Ms. Harkins:

Reference is made to your initial EUA 27034 submission dated November 20, 2020. Please see below for our discussion points in preparation of the teleconference scheduled for Wednesday, November 25, 2020, 10:30 – 12:00 PM.

1. We are not able to identify all of the subjects included in your Safety population (N=37,586) and in your All Enrolled population (N=43,448).
2. On page 74 of the document titled “Emergency Use Authorization (EUA) Request for Pfizer-BioNTech COVID-19 Vaccine” (Section m1.19 of EUA 27034.0) you have indicated that there are 37,706 participants who have a median follow-up of 2 months after Dose 2 and 37,586 participants (presented in Table 19 on page 75) who had a median of at least 2 months of follow-up after Dose 2 (including those analyzed in Phase 2). We have not been able to reproduce these values from your datasets.
3. In addition to recreating the study populations in comments 1 and 2, we would like to understand the reasons for these differences and your rationale for excluding various subjects/populations from your analyses.
4. Please confirm total number of subjects who missed their second vaccination and indicate whether the full safety data from these subjects were submitted, and in which dataset(s).
5. Suspected cases of COVID entered in CE, such as the case of subject C4591001 1231 12312982, which were not confirmed and whose relatedness to vaccine cannot be ruled out, should be reclassified as SAEs, in ADAE. Please discuss the number of subjects that would meet the criteria to be reclassified.
6. Using your flags (safety population, randomized population and enrolled population), we get the following numbers:
Enrolled: 43850
Are Eligible for the study at Randomization: 43780
Randomized: 43848
Randomized + Eligible for Study at Randomization: 43780
Safety Pop: 43748
Phase 3 30k Subjects: 37801
Safety Pop + Eligible for study at Rand: 43714
Phase 3 30k Subject + Safety Pop flag: 37711
Phase 3 30k Subjects + Safety + Eligible for study at Randomization: 37682

We have tried using many other variables in combination and we are not able to match your reported numbers.

7. Regarding the HIV+ population:

Using Enrolled Population there are 196 HIV+ subjects
 Using randomized flag there are 196 HIV+ subjects
 Using Safety population flag alone there are 196 HIV+ subjects

However, using combination of Safety Flag and Phase 3 30k flag, there are only 120 HIV+ subjects.

8. In your final analysis datasets, there are numerous records in the CE and AE datasets missing start dates.
9. In your final analysis datasets, there are 9 records in the DS dataset missing Start Date/Time of Disposition Event (DSSTDTC) and Study Day of Start of Disposition Event (DSSTDY).
10. In your final analysis datasets there are 1,713 AE records that don't have AESEV or AETOXGR populated.
11. In your interim analysis datasets there is 1 record where the death date in the Death Detail domain is different from in the Disposition domain and in your final analysis datasets there are 3 records where the death date in the Death Detail domain is different from in the Disposition domain as indicated in the tables below.

DDDTTC date is after RFPENDTC, death date in Death Detail domain is different from in Disposition domain.

- Study c4591001-ia-efficacy - 1 records (33.33%)

USUBJID	DDTEST	DDORRES	DDDTTC	RFPENDTC	Last Disposition date	DSDECOD
C4591001 1162 11621327	PRIMARY CAUSE OF DEATH	atherosclerotic disease	9/24/2020	9/13/2020	9/13/2020	DEATH

- Study c4591001-safety-fa-eff - 3 records (50%)

USUBJID	DDTEST	DDORRES	DDDTTC	RFPENDTC	Last Disposition date	DSDECOD
C4591001 1066 10661350	PRIMARY CAUSE OF DEATH	myocardial infarction	11/10/2020	11/3/2020	11/3/2020	DEATH
C4591001 1081 10811194	PRIMARY CAUSE OF DEATH	Cause is currently unknown. Detail will be updated once the death certificate has been received	11/11/2020	11/1/2020	11/1/2020	DEATH
C4591001 1162 11621327	PRIMARY CAUSE OF DEATH	atherosclerotic disease	9/24/2020	9/13/2020	9/13/2020	DEATH

12. In your interim analysis datasets there are 97 records missing MedDRA coding information and in your final analysis datasets there are 89 records missing MedDRA coding information.
