CBER References: EUA 27034.0

EUA Title: Human Coronavirus mRNA Vaccine (SARS-CoV-2 Spike Protein; BNT162b2) in Lipid Nanoparticles (ALC-0315, ALC-0159, DSPC and Cholesterol) (Pfizer-BioNTech COVID-19 Vaccine)

SUBJECT: CBER comments on Pharmacovigilance Plan

Dear Ms. Harkins:

Reference is made to your initial EUA 27034 submission dated November 20, 2020. We have the following comments regarding your Pharmacovigilance Plan.

1. Multisystem Inflammatory Syndrome. You include vaccine-associated enhanced disease (VAED) including Vaccine-Associated Enhanced Respiratory Disease (VAERD) as an Important Potential Risk in your pharmacovigilance plan (PVP). Multisystem Inflammatory Syndrome (MIS) may be an immune-mediated phenomenon and thus is a theoretical risk of vaccination against COVID-19 disease. Please note that MIS may occur in both adults and children and thus all age groups should be considered at risk for MIS.
 - a. Please provide your assessment of MIS and consider including MIS in your PVP as an Important Potential Risk.
 - b. Please note that the “Fact Sheet for Vaccination Providers” includes mandatory reporting of MIS cases by the vaccination provider to VAERS and to Pfizer. Please include reporting of MIS cases in your EUA request Section 13.2 *Vaccine Adverse Event Reporting System* to align with the Fact Sheet for Vaccination Providers.
 - c. We recommend you also add relevant fields for MIS in your data capture aid.
2. Pediatric age groups. In your PVP, you include use in pregnancy and lactation, and vaccine effectiveness as Missing Information. However, limited information is available for use of this product in pediatric age groups. Use of this product under the conditions of the EUA may include individuals 16-17 years of age. Therefore, please add pediatric age groups as an area of Important Missing Information to your PVP.
