IND Title: Human Coronavirus mRNA Vaccine (SARS-CoV-2 Spike Protein; BNT162b2) in Lipid Nanoparticles (ALC-0315, ALC-0159, DSPC and Cholesterol) (Pfizer-BioNTech COVID-19 Vaccine)

SUBJECT: CBER Comments regarding datasets - Assigning subjects with N-binding Antibody Neg at Visit 1 Flag

1. In the final analysis data set ADSL-Safety and FA Efficacy, we identified 368 subjects who did not have baseline N-binding assay results recorded in the IS domain, yet you defined non-missing values to the variable NIGV1FL (N-binding Antibody Neg at Visit 1 Flag) for these subjects. Of them, 13 were assigned with a “N” and 355 were assigned with a “Y.” Since this variable is also used to define the analysis population, please clarify why these subjects were assigned with NIGV1FL values while other subjects who had missing baseline N-binding assay results were not, and how the values are determined, given the data are missing. The list of these 368 subjects can be generated using the following SAS code:

```
proc sql;  
create table nbinding_missing as select usubjid from adsl where nigv1fl ne "" and  
usubjid not in (select distinct usubjid from is where index(visit, 'V1_DAY1_VAX1')>0);  
quit;
```
